

**PARTIAL FLOOR PLAN - BASE BID**

SCALE: 3/32" = 1'-0"

#### **A. Sanctuary Floor Modifications**

Several factors warrant the restoration of our sanctuary floor.

1. The safety of our parishioners because the entire area will be at one level
2. Additional space in the sanctuary for the ministers, choir, organ and auxiliary seating, as well as providing a small prayer space for daily mass and other prayer service
3. Space under the floor is needed to run the air-condition pipes for the new system and also structural support for the organ.
4. Raising the floor would give a better sight line for the assembly
5. The Baptistry needs repair and the floor needs stabilization.
6. The extension of the Sanctuary Floor will accommodate the new organ.

#### **B. Our Lady's Chapel and the Reconciliation Room**

The tabernacle will be placed in our Lady's Chapel for private adoration of the Blessed Sacrament. Also a Reconciliation room will be constructed in that space. The existing Reconciliation room will become the new Sacristy.

#### **C. The Main body of the church (The Nave)**

The existing terrazzo floors throughout the body of the church (the nave) will be restored. All carpet will be removed.

The Stations will be cleaned and relocated seven on each side of the church (back to the original spaces.)

The heating units on the side walls will be removed, the walls will be repaired and the grills will be painted and re-installed.

Painting will be done as needed through out the church.

#### **D. The Removal of the Balcony**

With the relocation of organ and the air-condition system, the balcony will no longer be needed. It is deteriorating and has become unusable. Access from the ground level to the top of the bell tower will be re-worked for safety. A small platform at the upper level above the shrine will be provided for video and picture taking. This will open the back of the church to the light originally intended with the design of the stained glass windows.

#### **E. Storage Space**

Two rooms located in both side lobby areas, which now house air-handlers for the old air-conditioning system, will be converted to storage rooms for the church.
